JESUS SIFONTE PRESENTS RELIABILITY CENTRED MAINTENANCE RE-ENGINEERED RCM-R

Introduction

Reliability Centered Maintenance is a proactive methodology that utilizes failure mode effect analysis to identify failure modes & propose suitable maintenance tasks that are safe, cost effective & sustainable.

Reliability centered maintenance is based around exploration of "what failures could happen", as opposed to root cause analysis (RCA) which is primarily used to examine "what caused the failure/s"

Whilst the RCM & RCA approaches both utilize the cause & effect approach, they apply it to very different questions

RCM-R® (Reliability Centered Maintenance - Reengineered) was developed by Jesús Sifonte in line with SAE Standard JA1011 to provide companies with a solid framework to help them achieve far better results with their RCM initiatives, lower their critical asset risk and reduce maintenance cost

Course Outline

- Know the scope and benefits of RCM applied according to the SAE JA1011 Standard.
- Understand the requirements of a genuine RCM process.
- Understand the role of the methodology within the context of Physical Asset Management.
- Practice the process steps with assets from your plant.
- Select failure management policies
- Distinguish the attributes of the process.
- Know the steps and requirements for the effective implementation of the process in your organization.
- Establish the bases for the certification of RCM-R® analysts, facilitators and instructors.
- Selection of Failure Consequences Management Policies
- Combination of interactive training & hands on activities.

Workshop Methodology

During this workshop you will be guided through the powerful concepts of RCM-R® and shown how to revolutionize your organization's maintenance strategies.

This well paced, highly interactive course includes a mixture of presentation of theory, examples & hands on application of what has been taught.

Trainees gain solid understanding of the steps of the RCM-R® process amongst their reliability, maintenance & asset management professional peers from industry.
